

JIMOH AYOMIDE

Lafia, Nigeria

PROFESSIONAL SUMMARY

Frontend-focused web developer and independent builder with hands-on experience in React, Next.js, Node.js, and Supabase, with deployed, production-level projects. Built real products from scratch, including a live Web3 market intelligence platform serving crypto news aggregation, token price tracking, and dynamic content generation. Experienced in structured analytical writing, content evaluation, guideline-based task execution, and clear written reasoning. Seeking remote opportunities in AI training, code review, and content evaluation where technical depth, attention to detail, and disciplined execution are valued.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, React, Next.js, Node.js, HTML, CSS, Python, Java

Backend & Database: Supabase (Auth, RLS, Storage, Realtime), REST APIs, Vercel Serverless Functions

Tools & Platforms: VS Code, GitHub, Vercel, Canva, CorelDRAW, Google Workspace, Microsoft Office

AI/Evaluation-Relevant: Structured written reasoning, comparative content judgment, guideline-based task execution, online research and information verification, code logic review, technical documentation

PROJECTS

VectorVerse — Web3 Market Intelligence Platform | Live: vectorverse-prp.vercel.app

Independent Build | 2026 – Present

- Built a full-stack Web3 platform from scratch using React and Next.js, deployed on Vercel with GitHub-integrated auto-deployment
- Engineered Vercel serverless functions to proxy CoinGecko, RSS, and global APIs solving CORS issues and enabling real-time data delivery for 24+ tracked tokens
- Built an RSS aggregation system pulling live crypto news from 20+ sources, with filtering, categorization, and display logic
- Developed a Canvas-based post graphic generator as a core platform feature, enabling dynamic branded image creation in-browser
- Implemented full SEO, PWA configuration, and Open Graph metadata for discoverability and social sharing

- Designed and executed the platform's brand identity including logo, color system, and UI component library

Realm Messenger — Messaging App | In Development

Independent Build | 2025 – Present

- Architecting a real-time messaging application with Web3 features using React, Supabase Realtime, and a full relational database schema
 - Designed and implemented Supabase schema covering profiles, realms, messages, direct chats, statuses, and contacts with Row Level Security policies
 - Configured Supabase Auth, storage buckets, and RLS to enforce per-user data access at the database level
-

EXPERIENCE

Web3 Content & Community Contributor | Remote

Multiple Projects (Clarnium, Newton, Soso value crypto, Monad) | 2024 – Present

- Wrote structured posts and threads for Web3 projects, adapting technical concepts into clear, audience-appropriate content
 - Moderated Telegram and WhatsApp communities across multiple active projects, maintaining communication flow and assisting users in fast-moving digital environments
 - Developed habits of concise written communication, consistency under guidelines, and research-backed content production across projects with different requirements and audiences
-

EDUCATION

B.Sc. Information Technology (*In Progress*)

Federal University — Nigeria | 2023 – Present

ADDITIONAL

- Available for remote work immediately across time zones
- Strongest in roles requiring technical reasoning, written evaluation, code logic review, and structured task execution
- Built all major projects independently with no team or formal employment demonstrating self-direction, consistency, and ability to ship
